

Run 1702 | Observed Signature and LLM-Mentioned Evidence

Frozen IF reference | 96 channels x 29 features | 129/129 valid detector subruns | strict threshold $|z| > 8$ | 5 saved Sol trials

Matrix: digitizer-only model; original feature order and settings. Orange label [n] = explicit text mention in n/5 trials, not internal model attribution.

Max values are NOT clipped; nonlinear color scale resolves both small and million-scale z . Frequency uses each cell's own valid-subrun denominator.

Grey = undefined / masked / no data, not zero. Missing channels are excluded from cell denominators and separately counted below. Orange cell borders require an explicit channel-feature link.

OBSERVED MATRIX

129/129 subruns have defined z values; 0 missing/empty/no- z .

186 cells exceed $|z|>8$ in at least 80% of their valid subruns.

Most persistent cells (not a cause ranking):

ch78 / pulseHeight_max_median: 100.0%; max 376; n=129.

ch93 / pulseHeight_min_median: 100.0%; max 342; n=129.

ch93 / pulseHeight_max_median: 100.0%; max 303; n=129.

ch57 / pulseHeight_max_median: 100.0%; max 216; n=129.

LLM-MENTIONED EVIDENCE

Counts are trials, not word occurrences.
Text counts include hypotheses/checks; observed-section mentions are shown separately.
trigger rate: 5/5 text; 5/5 observed-section.
LVDS: 5/5 text; 5/5 observed-section.
configuration: 5/5 text; 0/5 observed-section.
board matching: 5/5 text; 0/5 observed-section.
restart (proposed or hypothesized): 5/5 text; 0/5 observed-section.
readout failure/dropout: 3/5 text; 0/5 observed-section.
missing-channel behavior: 3/5 text; 1/5 observed-section.
Unambiguous target-observation cell links: 0.
No channel-feature Cartesian expansion. Generic pulse statistics, LVDS pins, mask state and missing-channel text remain notes.

PHASE 1 DIAGNOSES (saved category)

Trial 1: widespread_digitizer_feature_anomaly

Trial 2: widespread_digitizer_or_feature_extraction_anomaly

Trial 3: widespread waveform-feature or AutoDQM reference mismatch

Trial 4: detector_wide_pulse_feature_shift

Trial 5: digitizer_configuration_or_readout_anomaly

Reading across trials: Broad digitizer/processing/configuration/reference hypotheses recur, without one resolved mechanism.

Category text is reproduced from saved responses; it is not a true-cause label.
