

Run 2126 | Observed Signature and LLM-Mentioned Evidence

Frozen IF reference | 96 channels x 29 features | 86/86 valid detector subruns | strict threshold $|z| > 8$ | 5 saved Sol trials

Matrix: digitizer-only model; original feature order and settings. Orange label [n] = explicit text mention in n/5 trials, not internal model attribution.

Max values are NOT clipped; nonlinear color scale resolves both small and million-scale z . Frequency uses each cell's own valid-subrun denominator.

Grey = undefined / masked / no data, not zero. Missing channels are excluded from cell denominators and separately counted below. Orange cell borders require an explicit channel-feature link.

OBSERVED MATRIX

86/86 subruns have defined z values; 0 missing/empty/no- z .

0 cells exceed $|z|>8$ in at least 80% of their valid subruns.

Most persistent cells (not a cause ranking):

ch15 / nPulses_median: 15.1%; max 19.7; n=86.

ch9 / nPulses_median: 14.1%; max 9.32; n=85.

ch69 / nPulses_median: 14.0%; max 1e+06; n=86.

ch10 / nPulses_median: 12.8%; max 16.8; n=86.

Channel absence is separate from z :

ch0: absent in 1/86 detector subruns.

ch32: absent in 1/86 detector subruns.

ch54: absent in 1/86 detector subruns.

ch45: absent in 1/86 detector subruns.

Coverage limitation: Phase 1 Trigger/LVDS text covers only subruns 1-40; IF report covers 86 subruns.

Source: study_20260906T044011Z_7ac63c5a | Reference: juan_reproduction_digi_z8_if0001_train20_seed42_noTrigger_noLVDS_ignoreTriggerConfig

Offline visualization only. No new LLM calls. No ground-truth selection. Explicit mentions are not evidence of internal causal use by the LLM.

LLM-MENTIONED EVIDENCE

Counts are trials, not word occurrences.
Text counts include hypotheses/checks; observed-section mentions are shown separately.
readout failure/dropout: 5/5 text; 0/5 observed-section.
missing-channel behavior: 5/5 text; 5/5 observed-section.
restart (proposed or hypothesized): 5/5 text; 0/5 observed-section.
trigger rate: 5/5 text; 5/5 observed-section.
LVDS: 5/5 text; 5/5 observed-section.
configuration: 4/5 text; 0/5 observed-section.
board matching: 1/5 text; 0/5 observed-section.
Unambiguous target-observation cell links: 0.
No channel-feature Cartesian expansion. Generic pulse statistics, LVDS pins, mask state and missing-channel text remain notes.

ANOMALY FREQUENCY

PHASE 1 DIAGNOSES (saved category)

Trial 1: suspected_digitizer_readout_dropout

Trial 2: suspected_intermittent_digitizer_or_DAO_readout_dropout

Trial 3: suspected_digitizer_readout_dropout

Trial 4: suspected digitizer/DAQ readout data loss

Trial 5: intermittent_DAO_or_digitizer_readout_dropout

Reading across trials: All five categories favor digitizer/DAQ readout loss, with the concrete cause left uncertain.

Category text is reproduced from saved responses; it is not a true-cause label.
